

**Class VIII Session 2023-24**  
**Subject - Maths**  
**Sample Question Paper - 4**

**Time Allowed: 3 hours**

**Maximum Marks: 80**

## Section A

1. Find:  $\frac{2}{5} \times \frac{-3}{7} - \frac{1}{14} - \frac{3}{7} \times \frac{3}{5}$  [1]
  - a) 1
  - b)  $\frac{1}{2}$
  - c)  $-\frac{1}{2}$
  - d) 2
2. The product of two rational numbers is always a \_\_\_\_\_. [1]
  - a) rational number
  - b) negative number
  - c) irrational number
  - d) None of these
3. Solve:  $15(y - 4) - 2(y - 9) + 5(y + 6) = 0$  [1]
  - a) 3
  - b) 2
  - c)  $\frac{2}{3}$
  - d)  $\frac{3}{2}$
4. Given that  $-0.3k + 2.1 = 0.4k$ , the value of k = [1]
  - a) 21
  - b) 7
  - c) -1
  - d) 3
5. A side of square is  $3\sqrt{2}$  cm, then the length of its diagonal is: [1]
  - a)  $3\sqrt{2}$  cm
  - b) 18 cm
  - c) 3 cm
  - d) 6 cm
6. A quadrilateral has three acute angles each measuring  $75^\circ$ , the measure of fourth angle is [1]
  - a)  $130^\circ$
  - b)  $125^\circ$
  - c)  $135^\circ$
  - d)  $145^\circ$
7. What will be the number of zeroes in the square of the number 50? [1]
  - a) 4
  - b) 3
  - c) 2
  - d) 1
8. The smallest number by which 396 must be multiplied so that the product becomes a perfect square is: [1]
  - a) 11
  - b) 5
  - c) 2
  - d) 3
9. By which smallest natural number should 135 be divided so that the quotient is a perfect cube? [1]
  - a) 2
  - b) 3

- c) 9 d) 5
10. If the volume of a cubical box is  $35.937 \text{ m}^3$ , what is the length of its one side? [1]  
 a) 6.3 m b) 6.6 m  
 c) 3.3 m d) 3.6 m
11. A scooter was bought at Rs 42,000. Its value depreciated at the rate of 8% per annum. Find its value after one year. [1]  
 a) Rs 38,640 b) Rs 35,640  
 c) Rs 40,640 d) None of these
12. Subtract:  $3x(x - 4y + 5z)$  from  $4x(2x - 3y + 10z)$  [1]  
 a) 35 b)  $5x^2 + 25xz$   
 c)  $5x^2 + 25$  d)  $5x^2$
13. The sum of radius of the base and height of a solid cylinder is 37 m. If the total surface area of the cylinder is  $1628 \text{ m}^2$ , then find its volume. [1]  
 a)  $4528 \text{ m}^3$  b)  $4620 \text{ m}^3$   
 c)  $4020 \text{ m}^3$  d)  $2568 \text{ m}^3$
14. If the radius of a cylinder is tripled but its curved surface area is unchanged, then its height will be [1]  
 a) Tripled b) One third  
 c) One sixth d) Constant
15. If y be any non-zero integer, then  $y^0$  is equal to [1]  
 a) 0 b) -1  
 c) not defined d) 1
16. If  $\left(\frac{2}{5}\right)^{-4} \times \left(\frac{2}{5}\right)^{12} = \left(\frac{25}{4}\right)^{6-2x}$ , then x = ? [1]  
 a)  $\frac{1}{5}$  b)  $\frac{-1}{5}$   
 c) -5 d) 5
17. A garrison of 500 men had provision for 27 days. After 3 days a reinforcement of 300 men arrived. For how many more days will the remaining food last now? [1]  
 a) 16 b) 18  
 c) 15 d)  $17\frac{1}{2}$
18. The line graph shows the sale of dolls by Suhas from Monday to Saturday on a particular week. Given that cost of one doll is ₹ 35, how much did Suhas receive from the sale of dolls on Saturday? [1]

19. **Assertion (A):** 1 has no multiplicative inverse. [1]

20. **Assertion (A):** Two adjacent sides of a rectangle are equal. The name of the quadrilateral is square. [1]

Page 3 of 12

## Solution

### Section A

1.

(c)  $-\frac{1}{2}$

**Explanation:**  $\frac{2}{5} \times \frac{-3}{7} - \frac{1}{14} - \frac{3}{7} \times \frac{3}{5}$   
 $= \frac{3}{7} \left[ \frac{-2}{5} - \frac{3}{5} \right] - \frac{1}{14}$   
 $= \frac{3}{7} \left[ \frac{-2-3}{5} \right] - \frac{1}{14}$   
 $= \frac{3}{7} \left[ \frac{-5}{5} \right] - \frac{1}{14}$   
 $= \frac{-3}{7} - \frac{1}{14}$   
 $= \frac{-3 \times 2 - 1 \times 1}{14}$   
 $= \frac{-6-1}{14}$   
 $= \frac{-7}{14}$   
 $= \frac{-1}{2}$

2. (a) rational number

**Explanation:** The product of two rational numbers is always a rational number as, if we multiply any two rational numbers the product is a rational number ( with the exception of 0)

3.

(c)  $\frac{2}{3}$

**Explanation:**  $15(y - 4) - 2(y - 9) + 5(y + 6) = 0$   
 $15y - 60 - 2y + 18 + 5y + 30 = 0$   
 $18y - 12 = 0$   
 $18y = 12$   
 $y = \frac{12}{18}$   
 $y = \frac{2}{3}$

4.

(d) 3

**Explanation:**  $-0.3k + 2.1 = 0.4k$   
 $\Rightarrow 2.1 = 0.4k + 0.3k$   
 $\Rightarrow 2.1 = 0.7k$   
 $\Rightarrow k = \frac{2.1}{0.7} = 3$

5.

(d) 6 cm

**Explanation:** A/q  
Diagonal =  $\sqrt{2} \times \text{side}$   
 $= \sqrt{2} \times 3\sqrt{2}$   
 $= 6 \text{ cm}$

6.

(c)  $135^\circ$

**Explanation:** Since,  $\angle A + \angle B + \angle C + \angle D = 360^\circ$   
 $\therefore 75^\circ + 75^\circ + 75^\circ + \angle D$   
 $\Rightarrow 225^\circ + \angle D = 360^\circ$   
 $\Rightarrow \angle D = 360^\circ - 225^\circ = 135^\circ$

7.

(c) 2

**Explanation:** Number of zeroes at the end of the number 50 = 1

$\therefore$  Number of zeroes at the end of the square of the number 50 =  $2 \times 1 = 2$

8. (a) 11

**Explanation:**  $396 = 2 \times 2 \times 3 \times 3 \times 11$

So 396 should be multiplied by 11 to make the product a perfect square.

9.

(d) 5

**Explanation:**  $135 = 5 \times 3 \times 3 \times 3$

5 is left out and could not make a triplet, So, 5 is the smallest natural number by which 135 should be divided so that the quotient is a perfect cube.

10.

(c) 3.3 m

**Explanation:**  $\therefore$  Volume of a cube = (side)<sup>3</sup>

$$(\text{side})^3 = 35.937$$

$$\Rightarrow \text{side} = \sqrt[3]{35.937}$$

$$\Rightarrow \text{side} = \sqrt[3]{3.3 \times 3.3 \times 3.3}$$

$$\Rightarrow \text{side} = 3.3 \text{ m}$$

11. (a) Rs 38,640

**Explanation:**  $A = P\left(1 - \frac{r}{100}\right)^n$

We applied compound Interest formula as scooter depreciated then we take minus in formula

$$= ₹42000\left(1 - \frac{8}{100}\right)^1$$

$$= ₹ \frac{42000 \times 23}{25}$$

$$= \text{Rs } 38,640$$

12.

(b)  $5x^2 + 25xz$

**Explanation:**  $[4x(2x - 3y + 10z)] - [3x(x - 4y + 5z)]$

opening big brackets we get,

$$(8x^2 - 12xy + 40xz) - (3x^2 - 12xy + 15xz)$$

open small brackets we get,

$$(8x^2 - 12xy + 40xz) - 3x^2 + 12xy - 15xz$$

$$8x^2 - 3x^2 - 12xy + 12xy + 40xz - 15xz$$

$$5x^2 - 0 + 25xz$$

$$= 5x^2 + 25xz$$

13.

(b)  $4620 \text{ m}^3$

**Explanation:** Radius (r) + Height (h) = 37 m

Also, total surface area of cylinder =  $2\pi r(r + h)$

$$\Rightarrow 1628 = 2 \times \frac{22}{7} \times r(37)$$

$$\Rightarrow r = \frac{1628 \times 7}{2 \times 22 \times 37} = 7 \text{ m}$$

$$\therefore \text{Height} = 37 - 7 = 30 \text{ m}$$

So, volume of cylinder =  $\pi r^2 h$

$$= \frac{22}{7} \times (7)^2 \times 30 = 4620 \text{ m}^3$$

14.

(b) One third

**Explanation:** Let h' be the new height.

The curved surface area of a cylinder with radius r and height h =  $2\pi rh$

Now, according to the question, the radius is tripled. Then,

$$\text{Curved surface area} = 2\pi \times 3r \times h' = 2\pi rh$$

$$\Rightarrow 6\pi r \times h' = 2\pi rh$$

$$\Rightarrow h' = \frac{2\pi rh}{6\pi r}$$

$$\therefore h' = \frac{1}{3}h$$

Hence, the new height will be  $\frac{1}{3}$  of the original height.

15.

(d) 1

**Explanation:** Using law of exponents,

$a^0 = 1$  [ for every 'a' is non-zero integer]

Similarly,  $y^0 = 1$

16.

(d) 5

**Explanation:**  $\left(\frac{2}{5}\right)^{-4} \times \left(\frac{2}{5}\right)^{12} = \left(\frac{25}{4}\right)^{6-2x}$

$$\Rightarrow \left(\frac{2}{5}\right)^{12-4} = \left(\frac{4}{25}\right)^{2x-6} \Rightarrow \left(\frac{2}{5}\right)^8 = \left(\left(\frac{2}{5}\right)^2\right)^{2x-6}$$

$$\Rightarrow \left(\frac{2}{5}\right)^8 = \left(\frac{2}{5}\right)^{4x-12}$$

On comparing, we get

$$4x - 12 = 8 \Rightarrow 4x = 20 \Rightarrow x = 5$$

17.

(c) 15

**Explanation:** Let the remaining food will last for x days.

500 men had provisions for  $(27 - 3) = 24$  days.

$(500 + 300)$  men had provisions for x days. More men, less days

$$\therefore 800 : 500 :: 24 : x$$

$$\Rightarrow 800 \times x = 500 \times 24$$

$$\Rightarrow x = \frac{500 \times 24}{800} = 15$$

18.

(d) ₹ 1400

**Explanation:** Number of dolls sold on Saturday = 40

Cost of 1 doll = 35

Total cost of 35 dolls =  $40 \times 35 = 1400$

19.

(d) A is false but R is true.

**Explanation:** Zero has no multiplicative inverse. So, (A) is false. The multiplicative inverse of a number is a number that, when multiplied by the given number, gives 1 as the product. (R) is true.

20.

(b) Both A and R are true but R is not the correct explanation of A.

**Explanation:** If two adjacent sides of a rectangle are equal then the quadrilateral is the square. So, (A) is true.

A square is a quadrilateral with four right angles is also true but it's not a correct explanation of (A).

### Section B

21. It is given, one number =  $\frac{7}{9}$

Let other number be x.

According to the question,

One number  $\times$  Other numbers = Product of two numbers

$$\frac{7x}{9} = \frac{-14}{27}$$

$$x = \frac{-14}{27} \times \frac{9}{7}$$

$$x = \frac{-2}{3}$$

Hence, the other number is  $\frac{-2}{3}$

$$\begin{array}{r}
 22. \quad \begin{array}{r}
 5 \overline{) 15625} \\
 \underline{5} \phantom{0000} \\
 5 \phantom{0000} \overline{) 3125} \\
 \underline{5} \phantom{000} \\
 5 \phantom{000} \overline{) 625} \\
 \underline{5} \phantom{00} \\
 5 \phantom{00} \overline{) 125} \\
 \underline{5} \phantom{0} \\
 5 \phantom{0} \overline{) 25} \\
 \underline{5} \\
 5 \overline{) 5} \\
 \underline{5} \\
 1
 \end{array}
 \end{array}$$

By prime factorisation,

$$15625 = \underline{5} \times \underline{5} \times \underline{5} \times \underline{5} \times \underline{5} \times \underline{5} \text{ [grouping the factors in triplets]}$$

$$= 5^3 \times 5^3 \text{ [by laws of exponents]}$$

$$= (5 \times 5)^3$$

$$= 25^3 \text{ which is a perfect cube.}$$

All the terms form triplets

Therefore, 15625 is a perfect cube.

$$23. \text{ We have, } \frac{(3^{-2})^2 \times (5^2)^{-3} \times (t^{-3})^2}{(3^{-2})^5 \times (5^3)^{-2} \times (t^{-4})^3} = \frac{(3)^{-4} \times (5)^{-6} \times (t)^{-6}}{(3)^{-10} \times (5)^{-6} \times (t)^{-12}} [\because (a^m)^n = (a)^{mn}]$$

$$= (3)^{-4} \times (3)^{10} \times (5)^{-6} \times (5)^6 \times (t)^{-6} \times (t)^{12}$$

$$= (3)^{-4+10} \times (5)^{-6+6} \times (t)^{-6+12} [\because a^{-m} = \frac{1}{a^m}]$$

$$= (3)^6 \times 5^0 \times (t)^6 = (3t)^6$$

$$24. \text{ Mass of Mars} = 6.42 \times 10^{29} \text{ kg}$$

$$\text{Mass of the Sun} = 1.99 \times 10^{30} \text{ kg}$$

$$\text{Total mass of Mars and Sun together} = 6.42 \times 10^{29} + 1.99 \times 10^{30}$$

$$= 6.42 \times 10^{29} + 19.9 \times 10^{29} = 26.32 \times 10^{29} \text{ kg}$$

$$25. \text{ At first Factorising } 15(y+3)(y^2-16),$$

$$\text{we get } 5 \times 3 \times (y+3)(y-4)(y+4)$$

$$\text{Now on factorising } 5(y^2-y-12), \text{ we get } 5(y^2-4y+3y-12)$$

$$= 5[y(y-4) + 3(y-4)]$$

$$= 5 \times (y-4)(y+3)$$

$$\text{Therefore, on dividing the first expression by the second expression, we get } \frac{15(y+3)(y^2-16)}{5(y^2-y-12)}$$

$$= \frac{5 \times 3 \times (y+3)(y-4)(y+4)}{5 \times (y-4)(y+3)}$$

$$= 3(y+4)$$

### Section C

$$26. x + 7 - \frac{8x}{3} = \frac{17}{6} - \frac{5x}{2}$$

It is a linear equation since it involves linear expressions only.

$$\therefore x - \frac{8x}{3} + \frac{5x}{2} = \frac{17}{6} - 7 \dots \text{[Transposing } -\frac{5x}{2} \text{ to L.H.S. and 7 to R.H.S.]}$$

$$\therefore \frac{6x-16x+15x}{6} = \frac{17-42}{6}$$

$$\therefore \frac{5x}{6} = \frac{-25}{6}$$

$$\therefore x = \frac{-25}{6} \times \frac{6}{5} \dots \text{[Multiplying both sides by } \frac{6}{5}]$$

$$\therefore x = -5 \text{ this is the required solution.}$$

$$27. \text{ a. The probability of getting a ball} = \frac{\text{Number of events of getting a ball}}{\text{Total number of events}} = \frac{2}{8} = \frac{1}{4}$$

$$\text{b. The probability of getting a toy car} = \frac{\text{Number of events of getting a toy car}}{\text{Total number of events}} = \frac{3}{8}$$

$$\text{c. The probability of getting any gift except a chocolate} = \frac{\text{Number of events of getting any gift except a chocolate}}{\text{Total number of events}} = \frac{7}{8}$$

$$\begin{array}{r}
 63 \\
 \hline
 6 \overline{) 4000} \\
 \underline{- 36} \phantom{00} \\
 400 \\
 \underline{- 369} \phantom{0} \\
 31
 \end{array}$$

This shows that  $63^2$  is less than 4000 by 31. This means, if we subtract the remainder from the number, we get a perfect square, So, the required least number is 31.

Therefore, the required perfect square is  $4000 - 31 = 3969$ .

Hence,  $\sqrt{3969}=63$ .

29. M.P. of DVD = ₹ 4500

First discount = 10% of ₹ 4500

$$= \frac{10}{100} \times 4500 = ₹ 450$$

Price after first discount = ₹ 4500 - ₹ 450 = ₹ 4050

Second discount = 5% of reduced price

$$= \frac{5}{100} \times Rs.4050 = \frac{20250}{100} = ₹ 202.50$$

Net selling price of the DVD = ₹ 4050 - ₹ 202.50 = ₹ 3847.50.

$$30. 10mn + \left(-\frac{3}{8}mn\right) + \left(-\frac{1}{4}mn\right)$$

$$= 10mn - \frac{3}{8}mn - \frac{1}{4}mn$$

$$= \left(10 - \frac{3}{8} - \frac{1}{4}\right)mn$$

$$= \frac{80-3-2}{8}mn$$

$$= \frac{75}{8}mn$$

31. A rectangular sheet of dimensions 25 cm  $\times$  7 cm is rotated about its longer side which makes a cylinder with base 25 cm /and height 7 cm.

Surface area of a base =  $2\pi r$

$$\therefore 2\pi r = 25\text{cm}$$

$$\Rightarrow r = \frac{25 \times 7}{2 \times 22} = \frac{175}{44}\text{cm}$$

Volume of a cylinder =  $\pi r^2 h$

$$= \frac{22}{7} \times \frac{175}{44} \times \frac{175}{44} \times 7$$

$$= \frac{175 \times 175}{2 \times 44} = \frac{30625}{88}$$

$$= 348.011 \text{ cm}^3$$

$$\text{Surface area} = 2\pi r h = 2 \times \frac{22}{7} \times \frac{175}{44} \times 7$$

$$= \frac{44}{44} \times 175$$

$$= 175 \text{ cm}^2$$

32. Cubical box = 2m = 200cm (1m=100cm)

(The units of both should be the same)

Edge of box= 20cm

Number of small cubes that can be accommodated =  $200 \div 20 = 10$  cubes

33.	a	l	9	n	6
-----	---	---	---	---	---

b	5	m	25	10
---	---	---	----	----

If  $a = 6$  and  $b = 10$

Then;  $a \times b = 6 \times 10 = 60$

$\Rightarrow k = 60$

When  $a = 1$  and  $b = 5$ , then

$ab = k$

$\Rightarrow 1 \times 5 = 60$  [putting the value of  $k$ ]

$\Rightarrow 1 = 12$

When  $a = 9$  and  $b = m$ , then

$ab = k$

$9 \times m = 60$  [putting the value of  $k$ ]

$\Rightarrow m = \frac{20}{3}$

When  $a = n$  and  $b = 25$ , then

$ab = k$

$\Rightarrow n \times 25 = 60$  [putting the value of  $k$ ]

$\Rightarrow n = \frac{60}{25}$

$\Rightarrow n = \frac{12}{5}$

#### Section D

34. Let angles be  $3x$ ,  $4x$ ,  $5x$ ,  $6x$ .

Thus,  $3x + 4x + 5x + 6x = 360^\circ$

since sum of the angles of a quadrilateral is  $360^\circ$ .

So,  $18x = 360^\circ$  or,  $x = 20^\circ$

Thus, angles are  $60^\circ$ ,  $80^\circ$ ,  $100^\circ$ ,  $120^\circ$ .

35. Let marked price of the garments = ₹  $x$

Discount% = 12.5%

Discount = 12.5% of  $x = \frac{125}{10 \times 100} \times x = \frac{1}{8} \times x = \frac{x}{8}$

S.P. = M.P. - Discount

$= x - \frac{x}{8} = \frac{8x - x}{8} = \frac{7x}{8}$

C.P. = ₹ 2,100

Gain% = 25%

$S.P. = \frac{100 + \text{Profit}\%}{100} \times C.P.$

$= \frac{100 + 25}{100} \times 2100 = \frac{125}{100} \times 2,100 = ₹ 2,625$

Therefore,  $\frac{7x}{8} = ₹ 2,625$

$x = \frac{2625 \times 8}{7} = 375 \times 8 = ₹ 3,000$

Hence, Marked Price of Garments = ₹ 3,000.

36. Since the units should be same so let's convert cm into metre as the cost is also in metres.

Radius = 28cm = 0.28m (1cm = 1/100m)

Curved surface area of pillar =  $2\pi(\text{radius})(\text{height})$

$= 2 \times \frac{22}{7} \times 0.28 \times 4$

$= 44 \times \frac{16}{100}$

$= 7.04\text{m}^2$

Curved surface area of 24 pillars =  $7.04 \times 24$

$= 168.96\text{m}^2$

Cost of curved surface area of one  $\text{m}^2$  = Rs.8

Cost of curved surface area of  $168.96\text{m}^2$  pillar =  $\text{Rs.} 8 \times 168.96$

= Rs. 1351.68

Therefore, the costs of painting 24 cylindrical pillars are Rs.1351.68.

37.  $(m^2 - 14m - 32) \div (m + 2)$

$= \frac{m^2 - 14m - 32}{m + 2}$

$= \frac{m^2 - 16m + 2m - 32}{m + 2} \dots$  [Using Identity IV

$$\begin{aligned}
&= \frac{m(m-16)+2(m-16)}{m+2} \\
&= \frac{m(m-16)(m+2)}{m+2} \\
&= m - 16
\end{aligned}$$

### Section E

38. **(b)** 432  
**Explanation:** 432
39. **(c)** 3 : 4  
**Explanation:** 3 : 4
40. **(d)** 289 : 225  
**Explanation:** 289 : 225
41. **(b)** 97 : 29  
**Explanation:** 97 : 29
42. **(a)** 79 : 100  
**Explanation:** 79 : 100
43. **(d)** 2004  
**Explanation:** 2004  $\rightarrow$  500
44. **(d)** 2006  
**Explanation:** 2006  $\rightarrow$  100
45. **(b)** 200  
**Explanation:** No. of the labourers 2002 = 300  
Number of the labourers 2003 = 500  
Difference of the number of labourers in year 2002 and 2003 = 500 - 300 = 200
46. **(d)** 400  
**Explanation:** Number of the labourers 2001 = 200  
Number of labourers in 2004 = 600  
Rise in the labourers from 2001 to 2004 = 600 - 200 = 400
47. **(c)** 700  
**Explanation:** Number of labourers in 2004 = 600  
Number of labourers in 2006 = 100  
Sum of the number of labourers in 2004 and 2006 600 + 100 = 700
