

Understanding Quadrilateral

Check Your Concepts

Q.1. Match the following:

Directions: Give below are two columns – Column – I and column – II. Match the two columns and write the correct answer in the given blank grid.

1. Match the following:

Column – I		Column – II	
A.	 <p>$AB \parallel DC, AD \parallel BC$</p>	(i)	Rhombus
	 <p>$PQ \parallel SR, PS \parallel QR$ and $PQ = PS$</p>		
	 <p>$ST \parallel UV, SV \parallel TU, \angle SVU = 90^\circ$</p>		
	 <p>$AB \parallel CD$</p>		
B.		(ii)	Trapezium
C.		(iii)	Rectangle
D.			Parallelogram

2. Match the following:

Column – I		Column – II	
A.	quadrilateral in which the diagonals are equal and bisect each other perpendicularly is a	(i)	Its diagonals are not perpendicular
B.	A quadrilateral is a rectangle but not a square when	(ii)	The length of diagonals are not equal.
C.	A quadrilateral is a rhombus but not a square if	(iii)	60°
D.	In a quadrilateral the angles are in the ratio 3 : 4 : 5 : 6. Then the difference between the greatest and the smallest angle is		Square

Q.2. Fill in the blanks:

Directions: Complete the following statements with an appropriate word / term to be filled in the blank space(s).

- _____ is a polygon having n-sides.
- _____ is a line segment connecting two non-consecutive vertices of a polygon.
- The sum of the measures of the _____ angles of any polygon is 360°.
- If the non-parallel sides of a trapezium are of equal length, it is called _____.
- The adjacent angles of a parallelogram are _____.
- A _____ is an equilateral rectangle.
- A _____ is an equiangular but not equilateral quadrilateral.
- A _____ in which two adjacent angles are equal is a rectangle.
- A _____ in which both pairs of opposite angles are equal is parallelogram.
- In a _____ the number of acute angles is zero (or) two.

Q.3. True / False:

Directions: Read the following statements and mark your response as true or false.

- Each diagonal of a quadrilateral divides it into two triangles. []
- Each side of a quadrilateral is less than the sum of the remaining three sides. []
- A quadrilateral can at most have three obtuse angles. []
- A quadrilateral has four diagonals. []
- In a trapezium the diagonals bisect each other. []
- In a rectangle diagonals intersect at right angles. []
- The diagonals of a rhombus are equal. []

Q.4. Multiple choice questions:

Directions: Read the following questions and choose the answer that best answers the questions.

1. One of the angles of a parallelogram measures 63° . Measures of the other three angles of the parallelogram are
- (a) 63° , 63° , and 63° , because all the angles of a parallelogram are always congruent
 - (b) 63° , 27° , and 27° , because consecutive angles of a parallelogram are complementary and the sum of the measures of the angles of a parallelogram is 180°
 - (c) 63° , 117° and 117° because consecutive angles of a parallelogram are supplementary and the sum of the measures of the angles of a parallelogram is 360°
 - (d) Cannot be determined

2. The accompanying diagram shows quadrilateral ABCD, where $AD = BC$.

If P, Q, R, and S are midpoint of AB, AC, CD and BD respectively, which of the following is the correct statement?

- (a) PQRS is a rhombus.
 - (b) PQRS is a square.
 - (c) PQRS is a rectangle.
 - (d) none of these.
3. Consider the following statements:
- I. A parallelogram in which two adjacent angles are equal is a rectangle.
 - II. A quadrilateral in which both pairs of opposite angles are equal is parallelogram.
 - III. In a parallelogram the number of acute angles is zero or two.
- Which of the following is correct?
- (a) Only I
 - (b) II and III
 - (c) I, II and III
 - (d) All I, II and III

4. In the figure, ABCD is a square of side 10 cm. From the square, four congruent isosceles triangles are cut so that the remaining portion is regular octagon.

The value of x is

- (a) 5.45 cm. (b) 2.93 cm. (c) 1.73 cm. (d) 3.68 cm.
5. The sum of the exterior angles of a hexagon is
- (a) 360° (b) 540° (c) 720° (d) none of these
6. The number of sides of a regular polygon, if each of its interior angles is 135° , is given by
- (a) 4 (b) 6 (c) 8 (d) 10
7. Each interior angle of a regular polygon of n sides ($n \geq 3$) contains
- (a) $4n$ right angles (b) $\frac{2(n+1)}{n}$ right angles
- (c) $\frac{2(n-1)}{n}$ right angles (d) $\frac{2(n-2)}{n}$ right angles
8. If angles P, Q, R and S of the quadrilateral PQRS, taken in order, are in the ratio 3 : 7 : 6 : 4 then PQRS is a
- (a) rhombus (b) parallelogram (c) trapezium (d) kite
9. If a quadrilateral has two adjacent sides equal and the other two sides equal then it is called
- (a) parallelogram (b) square (c) rectangle (d) kite

- 10.** The interior angle of a regular polygon exceeds the exterior angle by 140° . Which one of the following is the number of sides in the polygon?
 (a) 15 (b) 16 (c) 18 (d) 20
- 11.** The angles of a pentagon in degree are $x^\circ, (x + 20)^\circ, (x + 40)^\circ, (x + 60)^\circ$ and $(x + 80)^\circ$. Measure of the largest angle is
 (a) 78° (b) 148° (c) 68° (d) 158°
- 12.** In a square $ABCD$, the diagonals bisect at O . Then triangle AOB is
 (a) an equilateral triangle (b) an isosceles but not a right angled triangle
 (c) a right angled but not an isosceles triangle (d) an isosceles right angled triangle

Q.2. Subjective questions:

- 1.** In parallelogram $DEFG$. $\angle E = 70^\circ$. What is the measure of $\angle F$ in degrees?

Ans.

- 2.** The angles of a quadrilateral are $x^\circ, x - 10^\circ, x + 30^\circ$ and $2x^\circ$. Find the greatest angle.

Ans.

- 3.** In a Rhombus $ABCD$. if $AB = AC$, then find the measure of $\angle BCD$.

Ans.

- 4.** In a parallelogram $ABCD$, if $AB = 2x + 5$, and $BC = 3x - 4$ then find the ratio of $AB : BC$.

Ans.

5. Find the value of x in the polygon:

Ans.

.....

.....

.....
