

Our Ever Changing Earth

Exercises

Tick (✓) the most appropriate option:

1. The point where the earthquake shock originates is called:
(a) Epicentre
(b) Core of the earth
(c) Origin
(d) Focus

2. The pipe in a volcano through which magma comes out is called:
(a) Crater
(b) Vent
(c) Magma chamber
(d) Pipe

3. The peeling away of the outer rock layer is called:
(a) Layering
(b) Exfoliation
(c) Weathering
(d) Erosion

4. Sudden movements in the earth's crust that cause earthquakes, landslides or volcanic eruptions are caused by:
(a) Exogenic forces
(b) Endogenic forces
(c) Volcanism
(d) Changing forces

Solutions

Tick (✓) the most appropriate option:

1. Epicentre
2. Vent
3. Exfoliation
4. endogenic forces
