

ICSE BIOLOGY CLASS 7  
ORGANIZATION IN LIVING THINGS

HIERARCHY OF ORGANIZATION

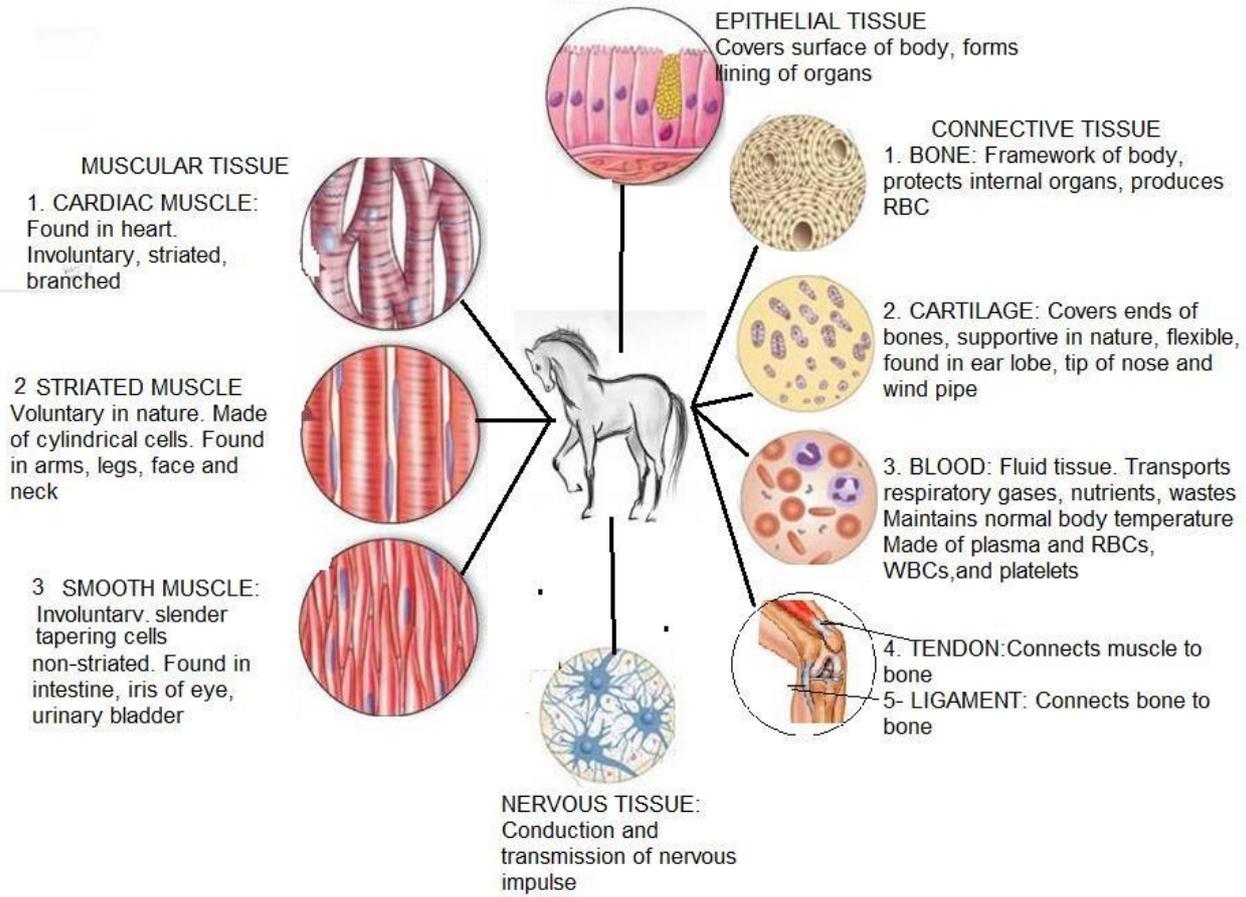

**Cell:** Structural and functional unit of life  
**Tissue:** Groups of cells similar in structure that perform a specific function  
**Organ:** Different tissues group together and coordinate functions to form an organ  
**Organ system:** Various organs coordinate to form an organ system e.g. stomach, intestine, liver, pancreas etc. work together to form the digestive system  
**Organism:** All organ systems come together to form an organism  
**Population:** Organisms of the same species living in a particular area  
**Community:** populations of different species coexisting with each other in a particular area  
**Ecosystem:** Interaction of biotic community with abiotic factors  
**Biosphere:** The region of integration between lithosphere, hydrosphere and atmosphere which supports life and contains all ecosystems

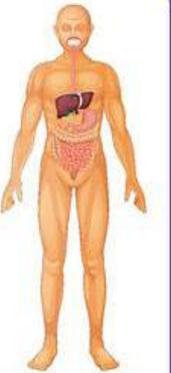

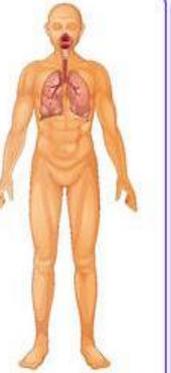

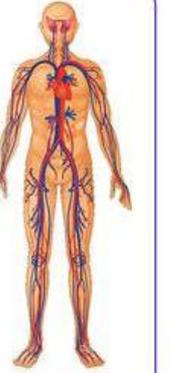

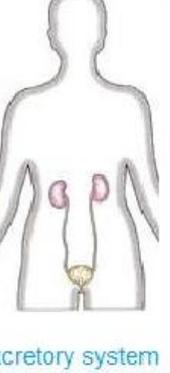

PLANT TISSUES

# ANIMAL TISSUES

# ORGANS AND ORGAN SYSTEMS IN THE HUMAN BODY

						
<b>Skeletal system</b> <i>provides structure to the body and protects internal organs</i>	<b>Muscular system</b> <i>supports the body and allows it to move</i>	<b>Digestive system</b> <i>breaks down food and absorbs its nutrients</i>	<b>Respiratory system</b> <i>takes in oxygen and releases waste gases</i>	<b>Nervous system</b> <i>controls sensation, thought, movement, and virtually all other body activities</i>	<b>Circulatory system</b> <i>transports oxygen, nutrients, and other substances to cells and carries away wastes</i>	<b>Excretory system</b> <i>Removal of nitrogenous waste osmoregulation</i>
Bones, Cartilage	All muscles of body	Mouth, oesophagus Stomach, intestines, rectum, liver, pancreas	Nose, wind pipe, lungs	Brain, spinal cord	Heart, arteries, veins	Kidneys Ureter Urinary bladder
The skin is the largest organ and forms an outer covering over all these systems
