Preface

India has a vast resource of livestock which play an important role in the national economy as well as in the socio-economic development and livelihood security of the rural people. India is leading milk producing country in the world with a production of 127 million tones. Milk is cheap but high value source of nutrients for rural population. If milk is not produced hygienically it can affect the health of many people. Besides being a health hazard, contamination of milk can lead to huge economic losses. Contamination occurs at different levels: at farm level, during collection and storage, and at processing centre. Milk needs to be protected from all possible sources of microbial contamination and various types of disease causing organism.

This book entitled "Milk production (Practical)" is designed to cater the requirement of students of class XI. The aim of writing thios book is to present practical experiments and exercises in a very simple language so that student should understand the applied aspect of milk production. The ultimate aim of this is to provide a uniform pattern of practical exposure in various farm and dairy operations, chemical and microbiological analysis of milk and extension techniques.

We will advise students that they should go through theory part of milk production thoroughly so that basic concept should be cleared. This will enable them to get maximum benefit from this practical book.
