$$1+1+1=3$$

भू-निम्नीकरण

कृषि योग्य भूमि पर दबाव का कारण केवल सीमित उपलब्धता ही नहीं, वरन इसकी गुणवत्ता में कमी भी इसका कारण है । मृदा अपरदन, लवणता (जलाक्रांतता) तथा भू-क्षारता से भू-निम्नीकरण होता है । भू-उर्वरकता के अप्रबंधन के साथ इसका अविरल उपयोग होने पर क्या स्थिति होगी ? भू-निम्नीकरण होगा तथा उत्पादकता में कमी आएगी । भू-निम्नीकरण का अभिप्राय स्थायी या अस्थायी तौर पर भूमि की उत्पादकता की कमी है ।

यद्यपि सभी निम्नकोटि भूमियाँ व्यर्थ भूमि नहीं हैं, लेकिन अनियंत्रित प्रक्रियाएँ इसे व्यर्थ भूमि में परिवर्तित कर देती हैं ।

भू-निम्नीकरण दो प्रक्रियाओं द्वारा तीव्रता से होता है । ये प्रक्रियाएँ प्राकृतिक तथा मानवजनित हैं । भारतीय दूर-संवेदन संस्थान ने व्यर्थ भूमि को दूर-संवेदन तकनीक की सहायता से सीमांकित किया है और इन प्रक्रियाओं के आधार पर इनको वर्गीकृत किया जा सकता है । जैसे – प्राकृतिक खड्ड, मरुस्थलीय या तटीय रेतीली भूमि, बंजर चट्टानी क्षेत्र, तीव्र ढाल वाली भूमि तथा हिमानी क्षेत्र । ये मुख्यतः प्राकृतिक कारकों द्वारा घटित हुई हैं । प्राकृतिक तथा मानवजनित प्रक्रियाओं से निम्नकोटि भूमियों में जलाक्रांत व दलदली क्षेत्र, लवणता व क्षारता से प्रभावित भूमियाँ; झाड़ी सहित व झाड़ियों रहित भूमियाँ आदि सम्मिलित हैं । कुछ अन्य निम्नकोटि भूमियाँ भी हैं जैसे – स्थानांतरित कृषि जनित क्षेत्र, रोपण कृषि जनित, क्षरित वन, क्षरित चरागाह तथा खनन व औद्योगिक व्यर्थ क्षेत्र जो मानवीय प्रक्रियाओं से कृषि के अयोग्य हुई हैं ।

(18.1) 'भू-निम्नीकरण' के अर्थ को स्पष्ट कीजिए ।

(18.2) किसी एक मानवजनित प्रक्रिया की व्याख्या कीजिए जो 'भू-निम्नीकरण' के लिए ज़िम्मेदार है ।

2×3=6

18. Read the given passage carefully and answer the questions that follow :

1+1+1=3

Land Degradation

The pressure on agricultural land increases not only due to the limited availability but also by deterioration of quality of agricultural land. Soil erosion, waterlogging, salinisation and alkalinisation of land lead to land degradation. What happens if land is consistently used without managing its fertility ? Land is degraded and productivity declines. Land degradation is generally understood either as a temporary or a permanent decline in productive capacity of the land.

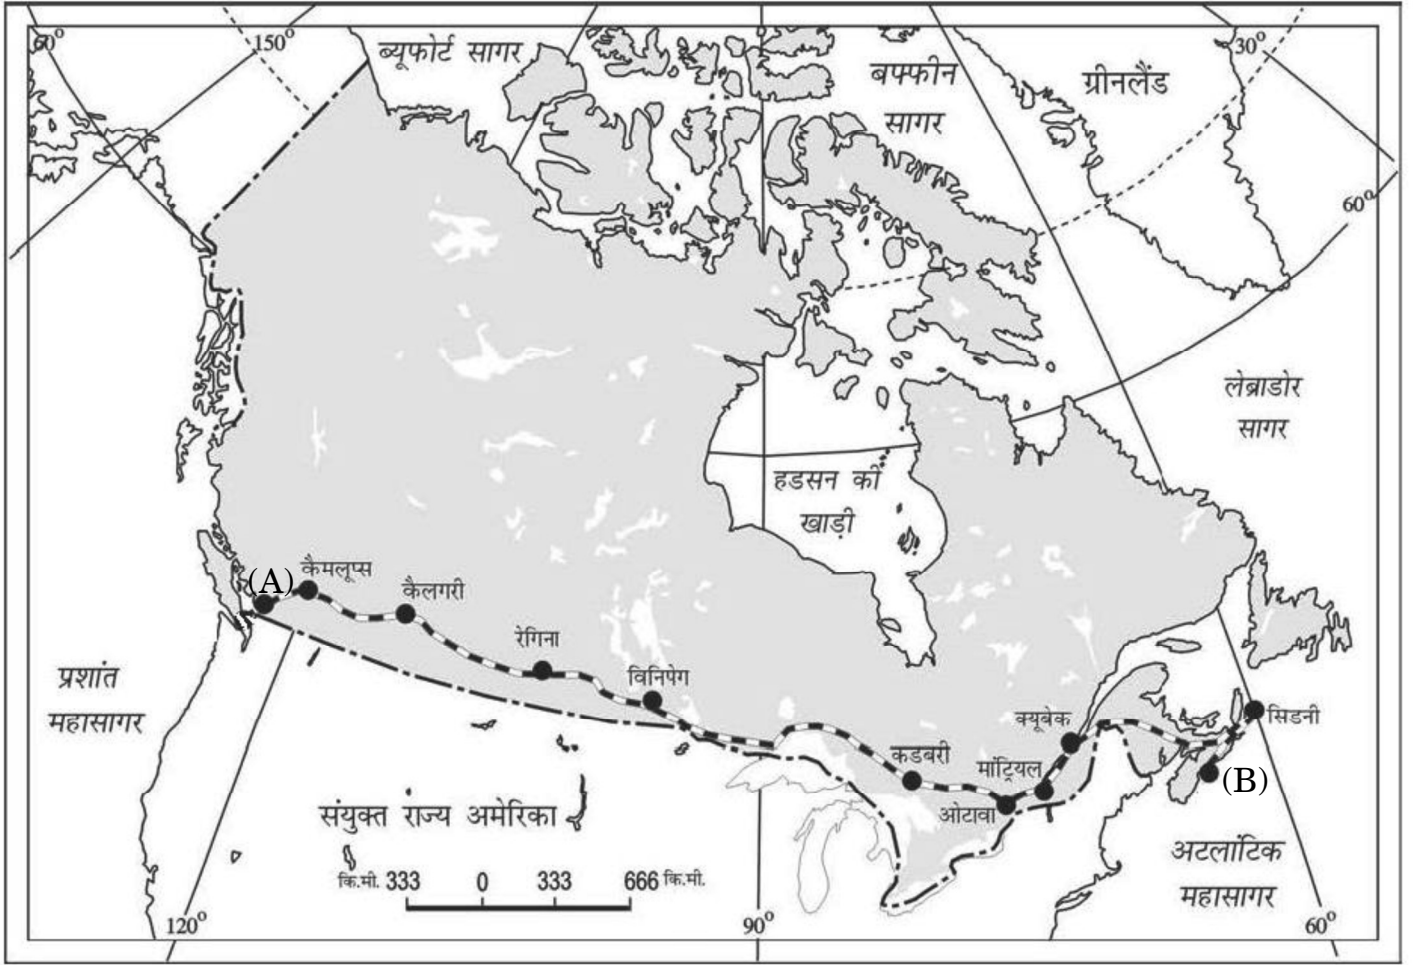

Though all degraded land may not be wasteland, but unchecked process of degradation may lead to the conversion to wasteland.

There are two processes that induce land degradation. These are natural and created by human beings. National Remote Sensing Centre (NRSC) has classified wastelands by using remote sensing techniques and it is possible to categorise these wastelands according to the processes that have created them. There are a few types of wastelands such as gullied/ravinous land, desertic or coastal sands, barren rocky areas, steep sloping land, and glacial areas, which are primarily caused by *natural* agents. There are other types of degraded lands such as waterlogged and marshy areas, land affected by salinity and alkalinity and land with or without scrub, which have largely been caused by *natural as well as human factors*. There are some other types of wastelands such as degraded shifting cultivation area, degraded land under plantation crops, degraded forests, degraded pastures, and mining and industrial wastelands, that are caused by human action.

- (18.1) Explain the meaning of 'land degradation'. 1
- (18.2) Explain any one man-made process which is responsible for 'land degradation'. 1
- (18.3) Suggest any two measures to solve the problem of 'land degradation'. $\frac{1}{2} + \frac{1}{2} = 1$

3	<p>Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one’s own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.</p>
4	<p>The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.</p>
5	<p>The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.</p>
6	<p>Evaluators will mark(✓) wherever answer is correct. For wrong answer CROSS ‘X’ be marked. Evaluators will not put right (✓)while evaluating which gives an impression that answer is correct and no marks are awarded. This is most common mistake which evaluators are committing.</p>

8	<p>If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.</p>

9	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note “ Extra Question ”.
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
11	A full scale of marks _____(example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	<p>Ensure that you do not make the following common types of errors committed by the Examiner in the past:-</p> <ul style="list-style-type: none"> • Leaving answer or part thereof unassessed in an answer book. • Giving more marks for an answer than assigned to it. • Wrong totaling of marks awarded on an answer. • Wrong transfer of marks from the inside pages of the answer book to the title page. • Wrong question wise totaling on the title page. • Wrong totaling of marks of the two columns on the title page. • Wrong grand total. • Marks in words and figures not tallying/not same. • Wrong transfer of marks from the answer book to online award list. • Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) • Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0) Marks.
15	Any unassessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the “ Guidelines for Spot Evaluation ” before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

What happens if land is consistently used without managing its fertility? Land is degraded and productivity declines. Land degradation is generally understood either as a temporary or a permanent decline in productive capacity of the land.</p> <p>Though all degraded land may not be wasteland, but unchecked process of degradation may lead to the conversion to wasteland.</p> <p>There are two processes that induce land degradation. These are natural and created by human beings. National Remote Sensing Centre (NRSC) has classified wastelands by using remote sensing techniques and it is possible to categorize these wastelands according to the processes that have created them. There are a few types of wastelands such as gullied / ravinous land, desertic or coastal sands, barren rocky areas, steep sloping land, and glacial areas, which are primarily caused by natural agents. There are other types of degraded lands such as waterlogged and marshy areas, land affected by salinity and alkalinity and land with or without scrub, which have largely been caused by natural as well as human factors. There are some other types of wastelands such as degraded shifting cultivation area, degraded land under plantation crops, degraded forests, degraded pastures, and mining and industrial wastelands, that are caused by human action.</p> <p>(18.1) Explain the meaning of land degradation.</p> <p>Land degradation is temporary or permanent decline in productive capacity. 1</p> <p>(18.2) Explain any one man made process which is responsible for 'land degradation'.</p> <p>Shifting agriculture, plantation agriculture, degraded forests, pastures, mining and industrial waste land are the manmade causes of land degradation.</p> <p>Anyone of the human action.</p>
