Answer. False.

India has 16.9 per cent of the world's population.

C. Match the columns

A	B
1. Doctor 2. Domestic helps 3. North-eastern states 4. Northern plains 5. Rural people	a. Thin population b. Skilled human resources c. Un-skilled human resources d. Agriculture e. Thick population

Answer:

A	B
1. Doctor 2. Domestic helps 3. North-eastern states 4. Northern plains 5. Rural people	b. Skilled human resources c. Un-skilled human resources a. Thin population e. Thick population d. Agriculture

D. Answer these questions briefly

Question 1.

What do you understand by the term human resources ?

Answer:

People are considered a resource as they have the skill and ability to exploit other natural resources and help a country in its growth. Thus, people are considered and called as human resource.

Question 2.

What are the differences between skilled and unskilled human resources ?

Answer:

Skilled human resources :

1. These people have specialised training to perform their work.
2. These people have different levels of formal education.
3. These people do jobs that require knowledge and skill and they cannot be easily replaced.
4. They generally earn high income.
5. Examples – doctors, engineers, scientist, lawyer, teacher, etc.

Unskilled human resources :

1. These people have very limited skills.
2. The people have very little formal education.
3. Their jobs do not require any specialized skills and they can be easily replaced.
4. They generally earn low wage.
5. **Examples :** workers at construction sites, domestic help, sanitation workers, etc.

Which areas in India are thickly populated ?

Answer:

The vast northern plains like Uttar Pradesh, Bihar and West Bengal and coastal plains are thickly populated areas in India.

Question 4.

Define sex ratio.

Answer:

Sex ratio is defined as the number of females per thousand males.

Question 5.

Why is the sex ratio low in Punjab and Haryana ?

Answer:

The sex ratio is low in Punjab (893) and Haryana (877) because of :

- Greater mortality rates of female babies
- Girl child being killed by abortion.

E. Answer these questions in one or two paragraphs

Question 1.

Why is human resource important for a country ?

Answer:

Human resource is important for a country as they can help a country meet its needs and help in its economic growth. Human beings are the most important resource of a country because they can use their intelligence and ability to exploit other resources such as land, minerals and water in the best possible way.

Question 2.

Explain briefly the impact of skilled human resource on the socio-economic development of the country.

Answer:

Human resources play an important role in the overall development of a country. Human resources are required for the proper utilization of a country's natural resources like mineral, water, forest, etc. because the optimal utilization of these resources is

necessary for the economic development of the country.

Skilled and the knowledgeable human resources make a rational use of all resources at their disposal and increase the volume of output and income for a country. They are well versed in using modern technology and thus help to bring development in a country. They help to increase production by producing a variety of goods and services of high quality.

The development of human resource works as a tool for economic change. It can make people knowledgeable, skilled and physically healthy. This can lead to a change in the attitudes of the people, develop their thought process and improve the quality of their life. Such changes encourage the spirit of entrepreneurship and motivate people to work hard, take risks, do research and explore their innovative capacity.

Question 3.

Discuss the role of health and education in developing human resources.

Answer:

Health and education play a very important role in the development of human resource. Healthy people can work well and do things quickly. They are able to utilize other resources in a better way. Unhealthy people are unable to perform well and spend money on their treatment which could otherwise be used to acquire other valuable resources or enhance their skills.

Education also plays an important role in the development of human resource. When a person receives good education, it improves his or her level of understanding, increases their capacity and mental efficiency to produce more and changes the attitude and behaviour of people as they gain more confidence in themselves. A country with high proportion of well educated people can achieve rapid economic growth.

Question 4.

What do you know about the rural-urban population composition in India ?

Answer:

Population of India may be classified into rural and urban population depending on where the people live.

Rural population — They live in villages. They generally earn their livelihood from agriculture, livestock rearing and other primary activities. In India, more people live in rural areas (about 69 per cent). In recent years, a large number of people have migrated from rural to urban areas in search of job, good education and better living conditions.

Urban population — They live in cities and towns. They earn their livelihood from jobs in offices, factories, trade, transport and services. In India, about 31 per cent people live in urban areas. Migration from rural to urban areas have had an impact on the population of urban areas.

Question 5.

Give an account of the distribution of population in India.

Answer:

India is the second most populous country in the world after China. We have just 2.4 per cent of the land area of the world but have about 16.9 per cent of the world's population. The last census conducted in 2011 recorded the Indian population at 1, 210, 193, 422. Out of these about 69% live in rural areas and 31% in urban areas. Northern plains have highest concentration of population which includes states like Uttar Pradesh, Bihar and West Bengal. The coastal plains are also thickly populated. The population is thin in the north-eastern states and in the desert region of the west. The Deccan plateau has a moderate population concentration. In India, the sex ratio is 940, which means on an average, we have 940 females to every 1000 males.

Question 6.

Write a note on sex ratio in India.

Answer:

Sex ratio is defined as the number of females per thousand males. In India, on an average, there are more males than females- 940 females for every 1000 males. In some states, the sex ratio is low like only 877 females to every 1000 males in Haryana and 893 females to every 1000 males in Punjab. There are a number of reasons. Greater mortality rates of female babies and the girl child being killed at birth are two important reasons for poor sex ratio in these states.

Kerala and Puducherry have the highest sex ratio with 1084 females to 1000 males in Kerala and 1038 females to every 1000 males in Puducherry. High literacy rate is the reason for this. The fewer number of females per 1000 males in India is a major concern. Which can raise many social issue.

F. Picture study.

Question 1.

In these pictures (i) and (ii) identify the two types of human resources in terms of skills.

Answer:

- A worker at a construction site unskilled person.
- An IT Professional skilled person.

Question 2.
