

WHAT IS CODING?

Coding is a method of expressing something in secret way.

WHAT IS DECODING?

Decoding is a process to understand a coded language.

TYPES OF CODING

1. **Letter Coding:** Letters are used in forward or backward or both the directions for making some code language.
2. **Direct Letter Coding:** Letters of a word are directly replaced by other letters.
3. **Number/Symbol Coding:** Numerals or symbols are assigned to words.
4. **Substitution Coding:** Some particular words are assigned to certain names.

EXAMPLE

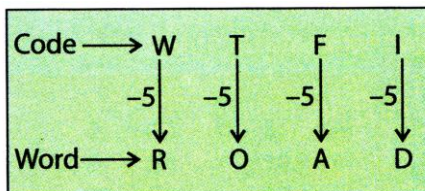

In a certain code, if the word 'ROAD' is coded as 'WTFI', then the word for the code 'GJFY' is

- (a) REAP
- (b) TAKE
- (c) BEAT
- (d) LATE

Explanation (c):

Each letter of the word is five steps behind the corresponding letter of the code.

Thus, we have:

So, BEAT is coded as GJFY.

Hence, the correct option is (c).
