

MIND MAP : LEARNING MADE SIMPLE

CHAPTER - 2

(i) $y = \sin^{-1}x$. Domain = $[-1,1]$, Range = $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]$
 (ii) $y = \cos^{-1}x$. Domain = $[-1,1]$ Range = $[0, \pi]$
 (iii) $y = \operatorname{cosec}^{-1}x$. Domain = $R - (-1,1)$, Range = $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right] - \{0\}$
 (iv) $y = \sec^{-1}x$. Domain = $R - (-1,1)$, Range = $[0, \pi] - \left\{\frac{\pi}{2}\right\}$
 (v) $y = \tan^{-1}x$. Domain = R , Range = $\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$
 (vi) $y = \cot^{-1}x$. Domain = R , Range = $(0, \pi)$.

Domain and range of inverse trigonometric functions

(I) $\sin : R \rightarrow [-1,1]$
 (ii) $\cos : R \rightarrow [-1,1]$
 (iii) $\tan : R - \left\{x : x = (2n+1)\frac{\pi}{2}, n \in Z\right\} \rightarrow R$
 (iv) $\cot : R - \{x : x = h\pi, n \in Z\} \rightarrow R$
 (v) $\sec : R - \left\{x : x = (2n+1)\frac{\pi}{2}, n \in Z\right\} \rightarrow R - (-1,1)$
 (vi) $\operatorname{cosec} : R - \{x : x = h\pi, n \in Z\} \rightarrow R - (-1,1)$

Inverse Trigonometric Functions

$\sin^{-1}x \neq (\sin x)^{-1} \cdot (\sin x)^{-1}$
 $= \frac{1}{\sin x}$ and same for other trigonometric functions.

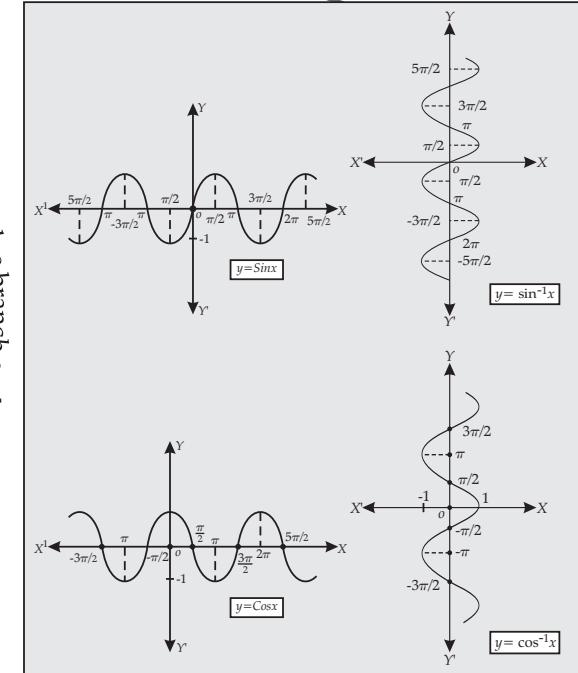

The range of an inverse trigonometric function is the principal value branch and those values which lies in the principal value branch is called the principal value of that inverse trigonometric functions.

Some important relations

(i) $y = \sin^{-1}x \Rightarrow x = \sin y$ (ii) $x = \sin y \Rightarrow y = \sin^{-1}x$
 (iii) $\sin(\sin^{-1}x) = x$ (iv) $\sin^{-1}(\sin x) = x$
 (v) $\sin^{-1}\frac{1}{x} = \operatorname{cosec}^{-1}x$ (vi) $\cos^{-1}(-x) = \pi - \cos^{-1}x$
 (vii) $\cos^{-1}\frac{1}{x} = \sec^{-1}x$ (viii) $\cot^{-1}(-x) = \pi - \cot^{-1}x$
 (ix) $\tan^{-1}\frac{1}{x} = \cot^{-1}x$ (x) $\sec^{-1}(-x) = \pi - \sec^{-1}x$
 (xi) $\sin^{-1}(-x) = -\sin^{-1}x$ (xii) $\tan^{-1}(-x) = -\tan^{-1}x$
 (xiii) $\tan^{-1}x + \cot^{-1}x = \frac{\pi}{2}$ (xiv) $\operatorname{cosec}^{-1}x + \sec^{-1}x = \frac{\pi}{2}$
 (xv) $\tan^{-1}x + \tan^{-1}y = \tan^{-1}\frac{x+y}{1-xy}$ (xvi) $2\tan^{-1}x = \tan^{-1}\frac{2x}{1-x^2}$
 (xvii) $\tan^{-1}x - \tan^{-1}y = \tan^{-1}\frac{x-y}{1+xy}$ (xviii) $2\tan^{-1}x = \sin^{-1}\frac{2x}{1+x^2} = \cos^{-1}\frac{1+x^2}{1-x^2}$
 For eg : to find the principal value of $\sin^{-1}\left(\frac{1}{\sqrt{2}}\right)$, let $\sin^{-1}\left(\frac{1}{\sqrt{2}}\right) = y$,
 $\Rightarrow \sin y = \frac{1}{\sqrt{2}}$ The range or the principal value branch of \sin^{-1} is $\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$
 and $\sin \frac{\pi}{4} = \frac{1}{\sqrt{2}}$ So, the principal value of $\sin^{-1}\left(\frac{1}{\sqrt{2}}\right)$ is $\frac{\pi}{4}$
