

BSEH Model Test Paper 2024-25

CLASS-11th (Sr. Sec.)

Roll No.

--	--	--	--	--	--	--	--	--	--

भूगोल

GEOGRAPHY
[Hindi & English Medium]
ACADEMIC/OPEN

[Time allowed- 3hours]

[Maximum Marks – 60]

- कृपया सुनिश्चित करें कि इस प्रश्न पत्र में मुद्रित पृष्ठ संख्या में 6 हैं और इसमें 26 प्रश्न हैं।
Please make sure that the printed pages in this question paper are 6 in number and it contains 26 questions.
- किसी प्रश्न का उत्तर देना शुरू करने से पहले उसका क्रमांक लिखना होगा।
Before beginning to answer a question, its Serial Number must be written.
- अपनी उत्तर पुस्तिका में खाली पन्ना / पन्ने न छोड़ें।
Don't leave blank page/ pages in your answer-book.
- उत्तर-पुस्तिका के अतिरिक्त कोई अन्य शीट नहीं दी जाएगी। अतः आवश्यकतानुसार ही लिखें व लिखे उत्तर को न काटें।
Except answer-book, no extra sheet will be given. Write to the point and do not strike the Written answer.
- परीक्षार्थी अपना रोल नंबर प्रश्न पत्र पर अवश्य लिखें।
Candidates must write their Roll Number on the question paper.
- कृपया प्रश्नों का उत्तर देने से पूर्व यह सुनिश्चित कर लें कि प्रश्नपत्र पूर्ण व सही है, परीक्षा के उपरान्त इस संबंध में कोई भी दावा स्वीकार नहीं किया जाएगा।
Before answering the questions, ensure that you have been supplied the correct and complete question paper, no claim in this regard, will be entertained after examination.

सामान्य निर्देश:

- (i) सभी प्रश्न अनिवार्य हैं।
- (ii) वस्तुनिष्ठ प्रश्नों के सही विकल्प लिखें।
- (iii) प्रत्येक प्रश्न के अंक उसके सामने दर्शाए गए हैं।

General Instructions:

- (i) All questions are compulsory.
- (ii) Write the correct option in objective type questions.
- (iii) Marks of each question are indicated against it.

खंड - क

Section A

इस खंड के सभी प्रश्न 1-1 अंक के हैं। इस खंड के कुल अंक $10 \times 1 = 10$ हैं।

All the questions in this section carry 1 mark each. Total marks of this section are $10 \times 1 = 10$.

प्र० 1. "भूगोल आमतौर पर पृथ्वी की सतह के विभिन्न हिस्सों से संबंधित घटनाओं के अंतर का अध्ययन करता है"। यह परिभाषा किसने दी?

Q.1 "Geography studies the differences of phenomena usually related in different parts of the earth's surface". Who gave this definition?

- (a) हम्बोल्ट Hambolt
- (b) अल्फ्रेड हार्टनर Alfred Hartner
- (c) कुमारी सेम्पल Kumari Sample
- (d) रेट्ज़ेल Ratzel

प्र० 2. निम्नलिखित में से कौन सा कथन आंतरिक ग्रहों का प्रतिनिधित्व करता है?

Q.2 Which one of the following statement represents the inner planets?

- (A) सूर्य और पृथ्वी के बीच ग्रह (a) Planets between the sun and the earth
- (B) सूर्य और क्षुद्रग्रहों की बेल्ट के बीच के ग्रह (b) Planets between the sun and the belt of asteroids
- (C) ग्रह गैसीय अवस्था में (c) Planets in gaseous state
- (D) उपग्रह रहित ग्रह (d) Planets without satellite(s)

प्र० 3. निम्नलिखित में से कौन सा अंतःजनित बलों का उदाहरण है?

Q.3 Which of the following is an example of endogenic forces?

- (A) कटाव (a) Erosion
- (B) ज्वालामुखी (b) Volcanism
- (C) अपक्षय (c) Weathering
- (D) संतुलन (d) Balance.

प्र० 4. मानव के लिए महत्वपूर्ण वायुमंडलीय परत है:

Q.4 Atmospheric layer important for human beings is:

- (A) समताप मंडल (a) Stratosphere
- (B) मध्यमंडल (c) Mesosphere
- (C) क्षोभमंडल (b) Troposphere
- (D) आयनमंडल (d) Ionosphere

प्र० 5. निम्नलिखित में से कौन सा कथन कोप्पेन की "A" प्रकार की जलवायु के लिए उपयुक्त है?

Q5. Which one of the following is suitable for Koeppen's "A" type of climate?

- (A) सभी महीनों का औसत तापमान 10 डिग्री सेल्सियस से नीचे (a) Average temperature for all the months below 10° C.
- (B) सबसे ठंडे महीने का औसत मासिक तापमान हिमांक बिंदु से अधिक (b) Mean monthly temperature of the coldest month more than freezing point
- (C) सभी महीनों का औसत मासिक तापमान 18 डिग्री सेल्सियस से अधिक (c) Mean monthly temperature of all the months more than 18°C
- (D) सभी महीनों में उच्च वर्षा (d) High rainfall in all the months

प्र० 6. पृथ्वी अपनी उपसौर अवस्था पर निम्न में से कब पहुंचती है:

Q.6 The earth reaches its perihelion in:

- (A) अक्तूबर (a) October
- (B) जुलाई (b) July
- (C) जनवरी (d) January
- (D) सितम्बर (c) September

प्र० 7 किस देश में 'पृथ्वी शिखर सम्मेलन' आयोजित किया गया था?

Q.7 In which country, the 'Earth Summit' was held?

Q.8 भारत के लिए मानक याम्योत्तर कौन सा देशांतर है?

Q.8 Which longitude is the standard meridian for India?

प्र० 9. निम्नलिखित अभिकथन एवं कारण पर विचार करते हुए दिये गए विकल्पों में से सही उत्तर का चयन कीजिये ।

Q° 9 Considering the following assertion and reason, select the correct answer from the given options.

अभिकथन : भारत अपनी भौगोलिक विशेषताओं के कारण विविध जलवायु का अनुभव करता है।

कारण: भारत की जलवायु अक्षांश, ऊँचाई, समुद्र से दूरी और पर्वत श्रृंखलाओं की उपस्थिति जैसे कारकों से प्रभावित होती है।

(A) अभिकथन और कारण दोनों सत्य हैं, और कारण अभिकथन की सही व्याख्या है।

(a) Both Assertion and Reason are true, and Reason is the correct explanation of Assertion.

(B) अभिकथन और कारण दोनों सत्य हैं, लेकिन कारण, अभिकथन की सही व्याख्या नहीं है।

(b) Both Assertion and Reason are true, but Reason is NOT the correct explanation of Assertion.

(C) अभिकथन सत्य है, लेकिन कारण गलत है।

(c) Assertion is true, but Reason is false.

(D) अभिकथन गलत है, लेकिन कारण सत्य है।

(d) Assertion is false, but Reason is true.

प्र० 10. निम्नलिखित अभिकथन एवं कारण पर विचार करते हुए दिये गए विकल्पों में से सही उत्तर का चयन कीजिये ।

Q° 10. Considering the following assertion and reason, select the correct answer from the given options.

अभिकथन : भारत में बाढ़ आम प्राकृतिक आपदा है।

कारण: मानसून के मौसम में भारी वर्षा और खराब जल निकासी व्यवस्था बाढ़ में योगदान करती है।

Assertion: Floods are common natural disasters in India.

Reason: Heavy rainfall during the monsoon season and poor drainage systems contribute to flooding.

(A) अभिकथन और कारण दोनों सत्य हैं, और कारण अभिकथन की सही व्याख्या है।

(a) Both Assertion and Reason are true, and Reason is the correct explanation of Assertion.

(B) अभिकथन और कारण दोनों सत्य हैं, लेकिन कारण, अभिकथन की सही व्याख्या नहीं है।

(b) Both Assertion and Reason are true, but Reason is NOT the correct explanation of Assertion.

(C) अभिकथन सत्य है, लेकिन कारण गलत है।

(c) Assertion is true, but Reason is false.

(D) अभिकथन गलत है, लेकिन कारण सत्य है।

(d) Assertion is false, but Reason is true.

खंड - ख

Section B

इस खंड के सभी प्रश्न 2-2 अंक के हैं। इस खंड के कुल अंक $6 \times 2 = 12$ हैं प्रत्येक प्रश्न का उत्तर 20 से 30 शब्दों में वांछित है ।

All the questions in this section are of 2 marks each. The total marks of this section are $6 \times 2 = 12$. Answer to each question is required in 20 to 30 words.

प्र.11. 'क्षेत्रीय विभेदन' से आप क्या समझते हैं?

Q.11 What do you mean by "areal differentiation"?

प्र.12 पृथ्वी की उत्पत्ति के संबंध में 'निहारिका परिकल्पना' क्या है?

Q.12 What is the 'Nebular Hypothesis' regarding the origin of the earth ?

प्र. 13 लघु ज्वार क्या हैं?

Q. 13 What are neap tides?

प्र.14 पारिस्थितिक अनुकूलन क्या है?

Q.14 What is ecological adaptation?

प्र. 15 सामाजिक वानिकी क्या है?

Q.15 What is social forestry?

अथवा/OR

प्र. 15 आम्र वृष्टि क्या है?

Q.15 What is mango shower?

प्र. 16: आपदा प्रबंधन क्या है?

Q.16 What is disaster management?

अथवा/OR

प्र. 16 राष्ट्रीय आपदा प्रबंधन संस्थान द्वारा वर्गीकृत भारत में भूकंप क्षेत्रों के नाम बताएं।

Q.16 Name the Earthquake zones in India categorized by National Institute of Disaster Management.

खंड - ग

Section C

इस खंड के सभी प्रश्न 3-3 अंक के हैं। इस खंड के कुल अंक $6 \times 3 = 18$ हैं। प्रत्येक प्रश्न का उत्तर 50 से 70 शब्दों में वांछित है।

All the questions in this section are of 3 marks each. Total marks of this section are $6 \times 3 = 18$. Answer to each question is required in 50 to 70 words.

प्र. 17 महाद्वीपीय अपवाह सिद्धांत की मूल अवधारणा की व्याख्या कीजिए।

Q.17 Explain the basic concept of continental drift theory.

प्र. 18. भौमजल द्वारा निर्मित निक्षेपीय भू-आकृतियों को समझाइए।

Q.18 Explain the depositional landforms formed by groundwater.

प्र. 19. हमारे देश के सबसे पूर्वी एवं पश्चिमी भाग के बीच 2 घंटों के समय में भिन्नता क्यों है?

Q.19 Why is there a time variation of 2 hours between the easternmost and western most part of our country?

प्र. 20 प्रायद्वीपीय नदियों की तीन विशेषताएँ लिखिए।

Q.20 Write three characteristics of the Peninsular rivers.

प्र.21 अंतर-उष्णकटिबंधीय अभिसरण क्षेत्र क्या है?

Q.21 What is the Inter-Tropical Convergence Zone?

अथवा/OR

BSEH Model Test Paper 2024-25

प्र. 21. पर्वतीय वनों के बारे में स्पष्ट कीजिए।

Q.21 Explain about mountain forests.

प्र. 22. हिमालय तथा भारत के उत्तर-पूर्वी क्षेत्र में अधिक भूकम्प क्यों आते हैं?

Q.22 Why are there more earthquakes in the Himalayas and in the north-eastern region of India?
अथवा/OR

Q.22 चक्रवात के बनने के लिए बुनियादी आवश्यकताएं क्या हैं?

Q.22 What are the basic requirements for the formation of a cyclone?

खंड - घ

Section D

इस खंड के सभी प्रश्न 5-5 अंक के हैं। इस खंड के कुल अंक $3 \times 5 = 15$ हैं। प्रत्येक प्रश्न का उत्तर 150 से 170 शब्दों में वांछित है।

प्र. 23. रासायनिक अपक्षय के विभिन्न प्रकारों की व्याख्या कीजिए।

Q.23 Explain different types of chemical weathering.

अथवा/OR

प्र. 23. नदी की विभिन्न अवस्थाओं को समझाइए।

Q.23 Explain the different stages of a river.

प्र. 24. उन प्रक्रियाओं की विवेचना कीजिए जिनके माध्यम से पृथ्वी-वायुमंडल प्रणाली ऊष्मा संतुलन बनाए रखती है।

Q.24 Discuss the processes through which the earth-atmosphere system maintains heat balance.

अथवा/OR

प्र. 24. पवनों की दिशा एवं वेग को कौन से कारक प्रभावित करते हैं?

Q.24 What factors affect direction and velocity of winds?

प्र. 25. उत्तरी मैदानों की विशेषताओं या विशेषताओं को स्पष्ट कीजिए?

Q.25 Explain the characteristics or features of Northern plains?

अथवा/OR

प्र. 25. गंगा नदी तंत्र के बारे में समझाइए।

Q.25 Explain about Ganga River System.

खंड - ङ

Section E

यह खंड मानचित्र कार्य से संबन्धित है। इस खंड के कुल अंक 5 हैं।

This section is related to map work. The total marks of this section are 5.

प्र. 26. भारत के मानचित्र पर निम्नलिखित को दर्शाइए-

Q.26. Show the following on the map of India-

A. भारत के कोई दो राज्य का जिनकी सीमाएँ भूटान से लगती हैं

BSEH Model Test Paper 2024-25

Any 2 states of India which share borders with Bhutan

- | | |
|-------------------|----------------|
| B. पाक जलडमरूमध्य | Palk Strait |
| C. महानदी डेल्टा | Mahanadi Delta |
| D. नर्मदा नदी | Narmada River |
| E. थार रेगिस्तान | Thar Desert |

BSEH Model Test Paper 2024-25

Haryana School Education Board – Bhiwani

Question wise Detailed Marking Scheme (2024 - 25)

Class – ^{11th}

Subject – Geography

Question	Marking scheme (including the importance of each part of the answer)	Aggregate marks	
Section – A Objective Type Questions			
1	(B) Alfred Hartner	1	1
2	(D) Planets without satellite(s)	1	1
3	(B) Volcanism	1	1
4	(C) Troposphere	1	1
5	(D) High rainfall in all the months	1	1
6	(C) January	1	1
7	Brazil	1	1
8	82°30'E	1	1
9	A) Reason is true, and Reason is the correct explanation of Assertion.	1	1
10	A) Reason is true, and Reason is the correct explanation of Assertion.	1	1
Total Marks of Section-A		10	
Section – B Very Short Answer Type Questions			
11	When there is similarity and dissimilarity among the physical and cultural features on the earth surface, it is called aerial differentiation.	2	2
12	Regarding the origin of the earth, the German philosopher Immanuel Kant, considered that the planets were formed out of a cloud of material associated with s youthful sun which was slowly rotating. This theory was supported by Laplace. The name of their theory is known as Nebular Hypothesis.	2	2
13	When the sun and moon are at right angles to each other and the forces of the sun and moon tend to counteract one another. The moon’s attraction, though more than twice as strong as the sun’s, is diminished by the counteracting force of the sun’s gravitational pull. These are called neap tides.	2	2
14	Different types of ecosystems exist with varying ranges of environmental conditions where various plants and animals species have got adapted through evolution. This phenomenon is known as ecological adaption.	2	2
15	Social forestry means the management and protection of forests and afforestation on barren lands with the purpose of helping in the environmental, social and rural development.	2	2
	or		
	Towards the end of summer, there are pre-monsoon showers which are a common phenomenon in Kerala and coastal areas of Karnataka. They are known as mango showers, locally since they help in the early ripening of mangoes.	2	
16	Disaster management is inclusive of all those processes and preparations which are undertaken to mitigate the losses from disasters. It includes steps that should be	2	2

BSEH Model Test Paper 2024-25

	taken before disaster, during disaster and after disaster.		
	or		
	Very high damage risk zone High damage risk zone	1	
	Moderate damage risk zone Low damage risk zone Very low damage risk zone.	1	
Total Marks of Section-B		12	
Section – C Short Answer Type Questions			
17	Alfred Wegener, a German meteorologist, put forth a comprehensive argument in the form of “the continental drift theory” in 1912. This was regarding the distribution of the oceans and the continents. According to Wegener, all the continents formed a single continental mass and mega ocean surrounded the same. He called the super continent as PANGAEA, meaning all earth. He named mega ocean as PANTHALASSA, meaning all water. According to him. Around 200 million years ago, the super continent, Pangaea, began to split. Pangaea first broke into two large continental masses as Laurasia and Gondwanaland forming the northern and southern components respectively. Subsequently, Laurasia and Gondwanaland continued to break into various smaller continents that exist today. A variety of evidence was offered in support of the continental drift.	3	3
18	The depositional landform formed by the groundwater are: Stalactites: Stalactites hang as icicles of different diameter. Normally they are broad at their bases and taper towards the free ends showing up in variety of forms.	1	3
19	Stalagmites: Stalagmites rise up from the floor of the caves. In fact stalagmites form due to dripping water from the surface or through the thin pipe of stalactite, immediately below it. Stalagmite may take the shape of a column, a disc with either a smooth, rounded bulging end or a miniature crater like depression.	1	
	Pillars: The stalagmite and stalactite eventually fuse to give rise to column and pillars.	1	
19	Longitudinal extent of India is 68°7' to 97°25' E-(2-9°). There is time variation of 2 hours between easternmost and the westernmost parts of our country. The sun rises two hours earlier in Arunachal Pradesh as compared to Gujarat. This is because the earth is tilted and also it rotates in east to west direction. So while rotation, the eastern parts of the world experiences the sun rays earlier as compared to the western parts of the world. 1 degree = 4 minutes 30 degree = 4 x 30 = 120 minutes 120 minutes = 2 hours	3	3
20	These rivers originate in peninsular plateau and central highland. These are seasonal as it is dependent on monsoon rainfall. They reflect super imposed type of drainage pattern and rejuvenated resulting in trellis, radial and rectangular patterns. These rivers are smaller having fixed course with well-adjusted valleys. Their catchment area is relatively smaller basin. These rivers are old rivers with graded profile, and have almost reached their base levels.	3	3
21	The Inter Tropical Convergence Zone (ITCZ) is a low pressure zone located at the equator where trade winds converge, and so, it is a zone where air tends to ascend. In July, the ITCZ is located around 20°N-25°N latitudes (over the Gangetic plain). These are sometimes called the monsoon trough. This monsoon trough encourages	3	3

BSEH Model Test Paper 2024-25

	<p>the development of thermal low over north and northwest India. Due to the shift of ITCZ, the trade winds of the southern hemisphere cross the equator between 40° and 60°E longitudes and start blowing from southwest to northeast due to the Coriolis force. It becomes southwest monsoon. In winter, the ITCZ moves southward, and so the reversal of winds from northeast to south and southwest, takes place. They are called northeast monsoons.</p>		
	or		
	<p>The Himalayan ranges show a succession of vegetation from the tropical to the tundra, which change in with the altitude.</p> <p>Mountain forests can be classified into two types, the northern mountain forests and the southern mountain forests. Deciduous forests are found in the foothills of the Himalayas. It is succeeded by the wet temperate type of forests between altitudes of 1,000–2,000 m. In the higher hill ranges of north-eastern India, hilly areas of West Bengal and Uttaranchal, evergreen broad leaf trees such as oak and chestnut are predominant. Between 1,500–1,750 m, pine forests are also well-developed in this zone, with Chir Pine as a very useful commercial tree. Deodar, a highly valued endemic species grows mainly in the western part of the Himalayan range. Blue pine and spruce appear at altitudes of 2,225–3,048 m. At many places in this zone, temperate grasslands are also found. But in the higher reaches there is a transition to Alpine forests and pastures. Silver firs, junipers, pines, birch and rhododendrons, etc. occur between 3,000–4,000 m.</p>	3	
22	<p>Indian plate is moving at a speed of one centimetre per year towards the north and north-eastern direction and this movement of plates is being constantly obstructed by the Eurasian plate from the north. As a result of this, both the plates are said to be locked with each other resulting in accumulation of energy at different points of time. Excessive accumulation of energy results in building up of stress, which ultimately leads to the breaking up of the lock and the sudden release of energy, causes earthquakes along the Himalayan arch.</p>	3	3
	or		
	<p>Following are the basic requirements for the formation of cyclones: Large and continuous supply of warm and moist air that can release enormous latent heat.</p>	1	
	<p>Strong Coriolis force that can prevent filling of low pressure at the centre because absence of Coriolis force near the equator prohibits the formation of tropical cyclone between 0°-5° latitude.</p>	1	
	<p>Unstable condition through the troposphere that creates local disturbances around which a cyclone develops. Absence of strong vertical wind wedge, which disturbs the vertical transport of latent heat.</p>	1	
Total Marks of Section-C			18
Section – D Long Answer Type Questions			
23	<p>Different types of chemical weathering includes:</p> <p>1. Oxidation and Reduction: Oxidation is the effect of oxygen in air and water on the rocks. The atmospheric oxygen in rainwater unites with minerals in rocks specially with iron compounds. When oxidised minerals are placed in an environment where oxygen is absent, reduction takes place. It exists normally below water table, in area of stagnant water in more hot and humid climates.</p>	2	5
	<p>2. Carbonation: When the carbon dioxide in atmosphere dissolves in water it form carbonic acid that affects the rocks, it is carbonation. It has acidic affect and dissolves calcium carbonates and magnesium carbonates such as gypsum, marble, limestone.</p>	1	

BSEH Model Test Paper 2024-25

	3. Hydration: When the hydrogen of water dissolves in rocks hydration occurs. Certain minerals in rocks increase their volume and become heavy when observe water contains hydrogen. They break due to its increased pressure and the colour also changes.	1	
	4. Solution: Rainwater is able to dissolve certain minerals and leaching of the soil occurs. Normally solids are also removed during leaching. For e.g.: gypsum, rock salt, etc. undergo solution.	1	
	or		
	A river passes through three stages like a human being: youth, mature and old. 1. Youth Stage: Youth streams are less in number. In this stage with poor integration and flow over original slopes showing shallow V-shaped valleys with no floodplains or with very narrow floodplains along trunk streams. Streams divides are broad and flat with marshes, swamps and lakes. If meanders are present, they develop over these broad upland surfaces. These meanders may eventually entrench themselves into the uplands. Waterfalls and rapids may exist where local hard rock bodies are exposed.	2	
	2. Mature Stage: During this stage streams are plenty with good integration. The valleys are still V-shaped but deep; trunk streams are broad enough to have wider floodplains within which streams may flow in meanders confined within the valley. The flat and broad inter stream areas and swamps and marshes of youth disappear and the stream divides turn sharp. Waterfalls and rapids disappear.	2	
	3. Old Stage: Smaller tributaries during old age are few with gentle gradients. Streams meander freely over vast floodplains showing natural levees, oxbow lakes, etc. Divides are broad and flat with lakes, swamps and marshes. Most of the landscape is at or slightly above sea level.	1	
24	1. Conduction: The earth after being heated by insolation transmits the heat to the atmospheric layers near to the earth in long wave form. The air in contact with the land gets heated slowly and the upper layers in contact with the lower layers also get heated. It takes place when two bodies of unequal temperature are in contact with one another, there is a flow of energy from the warmer to cooler body. The transfer of heat continues until both the bodies attain the same temperature or the contact is broken. Conduction is important in heating the lower layers of the atmosphere.	2	5
	2. Convection: The air in contact with the earth rises vertically on heating in the form of currents and further transmits the heat of the atmosphere. This vertical heating of atmosphere is known as convection. The convection transfer of energy is confined only to the troposphere.	1	
	3. Advection: The transfer of heat through horizontal movement of air is called advection. Horizontal movement of the air is relatively more important than the vertical movement. In tropical regions particularly in northern India during summer season local winds called 'loo' is the outcome of advection process.	2	
	or		
	Air is set in motion due to the differences in atmospheric pressure. The air in motion is called wind. The wind blows from high pressure to low pressure. The wind at the surface experiences friction. Following factors affect the direction and velocity of winds.	1	
	1. Pressure gradient force: The differences in atmospheric pressure produces a force. The rate of change of pressure with respect to distance is the pressure	1	

BSEH Model Test Paper 2024-25

	gradient.		
	2. Frictional force: It affects the speed of the wind. It is greatest at the surface and its influence generally extends upto an elevation of 1 – 3 km. Over the sea surface the friction is minimal.	1	
	3. Coriolis force: The rotation of the earth about its axis affects the direction of the wind. This force is called the Coriolis force after the French physicist who described it in 1844. In addition, rotation of the earth also affects the wind movement. The force exerted by the rotation of the earth is known as the Coriolis force.	1	
	4. Pressure and wind: The velocity and direction of the wind are the net result of the wind generating forces. The winds in the upper atmosphere, 2-3 km above the surface, are free from frictional effect of the surface and are controlled mainly by the pressure gradient and the Coriolis force. When isobars are straight and when there is no friction, the pressure gradient force is balanced by the Coriolis force and the resultant wind blows parallel to the isobar. This wind is known as the geostrophic wind.	1	
25	<p>The Northern Plains-</p> <p>These plains extend approximately 3,200 from the east to the west.</p> <p>The average width of these plains varies between 150-300 km.</p> <p>The maximum depth of alluvium deposits varies between 1,000-2,000 m.</p>	1	5
	<p>The area covered by northern plains is 7 lakhs square km and is most densely populated region of country.</p> <p>From north to South, these plains can be divided into three sub divisions: Bhabar, Tarai and Alluvial Plains. The alluvial plains can be further divided into the Khadar and the Bhangar.</p>	1	
	<p>Bhabar</p> <p>It is a narrow belt ranging between 8-16 km parallel to the Shiwalik foothills at the breaking of the slopes.</p> <p>The streams and rivers coming from the mountain deposit heavy materials of rocks and boulders and at times, disappear in this zone.</p>	1	
	<p>Tarai</p> <p>Its approximate width is of 20-30 km where most of the streams and river re-emerge without having any properly demarcated channel, thereby, creating marshy and swampy condition known as the Tarai.</p> <p>It has a luxurious growth of natural vegetation and houses a varied wild life.</p>	1	
	<p>Alluvial Plains</p> <p>These plains have characteristic features of mature stage of fluvial erosional and depositional landforms such as sand bars, meanders, ox-bow lakes and braided channels. The Brahmaputra plains are known for their riverine islands and sand bars.</p> <p>The mouths of these mighty rivers also form some of the largest deltas of the world, for example, the famous Sunderbans delta.</p> <p>These river valley plains have a fertile alluvial soil cover which supports a variety of crops like wheat, rice, sugarcane and jute, and hence supports a large population.</p>	1	
	or		
	<p>The Ganga System:</p> <p>1. The Ganga is the most important river of India both from the point of view of its basin and cultural significance. It rises in the Gangotri glacier near Gaumukh (3,900 m) in the Uttarkashi district of Uttarakhand. Here, it is known as the Bhagirathi. It cuts through the Central and the Lesser Himalayas in narrow gorges.</p>	1	
	<p>2. At Devaprayag, the Bhagirathi meets the Alaknanda; hereafter, it is known as the Ganga. The Alaknanda has its source in the Satopanth glacier above Badrinath. The</p>	1	

BSEH Model Test Paper 2024-25

	Alaknanda consists of the Dhauti and the Vishnu Ganga which meet at Joshimath or Vishnu Prayag.		
	3. The river has a length of 2,525 km. It is shared by Uttarakhand (110 km) and Uttar Pradesh (1,450 km), Bihar (445 km) and West Bengal (520 km). The Ganga basin covers about 8.6 lakh sq. km area in India alone.	1	
	4. The Ganga river system is the largest in India having a number of perennial and non-perennial rivers originating in the Himalayas in the north and the Peninsula in the south, respectively. The Son is its major right bank tributary.	1	
	5. The important left bank tributaries are the Ramganga, the Gomati, the Ghaghara, the Gandak, the Kosi and the Mahananda. The Yamuna, the westernmost and the longest tributary of the Ganga, has its source in the Yamunotri glacier on the western slopes of Banderpunch range (6,316 km).	1	
	6. The river finally discharges itself into the Bay of Bengal near the Sagar Island.
