

Chemical Bonding and Molecular Structure

★ Formal Charge

$$\left[\begin{array}{l} \text{Formal Charge (F.C.)} \\ \text{on an atom in a} \\ \text{Lewis structure} \end{array} \right] = \left[\begin{array}{l} \text{total no. of valence} \\ \text{electrons in the} \\ \text{free atom} \end{array} \right] - \left[\begin{array}{l} \text{total no. of non bonding} \\ \text{(lone pair) electrons} \end{array} \right] - \frac{1}{2} \left[\begin{array}{l} \text{total number of} \\ \text{bonding electrons} \end{array} \right]$$

★ Dipole moment $\mu = Q \times r / D$

Q = charge, r = distance of separation
Debye ($1D = 3.33564 \times 10^{-30} \text{ C-m}$)

★ Sum and difference of wave functions $\Psi_{MO} = \Psi_A \pm \Psi_B$

★ Bond order = $\frac{1}{2} (N_b - N_a)$

N_b = No. of electrons occupying bonding orbitals
 N_a = No. of electrons occupying antibonding orbitals
